

THE EQUIPMENT WE USE

TARGETED CRYOTHERAPY DEVICE

The Science of Cold, The Power of Healing.

HOW IT WORKS

1 RAPID COOLING VIA LIQUID CO₂

The device delivers pressurized liquid CO₂. When the trigger is pulled, the CO₂ expands rapidly, instantly cooling the target area to temperatures of -78°F to -108°F as it vaporizes.

2 TRIGGERING THERMAL SHOCK

The operator sweeps the cold vapor over the target area. Dual laser and temperature sensors monitor skin in real time, dropping the temperature from -32°C (90°F) down to 4°C (39°F) or below in under 30 seconds.

3 BIOLOGICAL RESPONSES

This rapid, safe drop triggers the body's natural healing response for pain relief, recovery, or fat reduction.

CORE TECHNOLOGY & SPECS

COOLANT: Filtered Liquid CO₂

TEMPERATURE DROP: Cools skin from -32°C (90°F) down to 4°C (39°F) or below in under 30 seconds

WEIGHT: ~400 g (handheld unit)
~8 lb (18 lbs) (full kit in case)

SAFETY FEATURES: Laser proximity sensors, dual skin temperature sensors, and auto-shutoff gas controls.

PORTABLE & VERSATILE: Lightweight build for clinics, mobile services, sports events, and more

IDEAL FOR

Athletes & Sports Recovery

Chronic Pain & Injury Relief

Physiotherapy & Rehab Clinics

Post-Workout Recovery

Pre-Workout Performance Enhancement

Body Sculpting & Aesthetics
